EXPERIENCE

Frontend Developer Intern — SmallFare Apr 2026 – Jul 2026

- Built SSR/SSG pages using Next.js and developed responsive, reusable UI components with React.js and TypeScript.
- Optimized data fetching with caching and pagination, improving API efficiency and overall application performance.

Tech Stack: Next.js, React.js, JavaScript, TypeScript, Git, REST APIs

TECHNICAL SKILLS

Languages: C++, JavaScript (ES6), TypeScript

Backend: Node.js, Express.js, Kafka, Redis, BullMQ, JWT (rotation & blacklisting), Google OAuth 2.0

Databases: MongoDB, PostgreSQL (Prisma)

Frontend: React.js, Next.js (SSR/SSG/ISR), React Query (Infinite Queries), Tailwind CSS

Testing: Vitest, Supertest, Unit Testing, Integration Testing, API Testing, Mocking

DevOps: Docker, GitHub Actions (CI), Git

Core Strengths: Event-Driven Architecture | Distributed Systems | Fault-Tolerant Design | Cryptographic Security | Real-Time Observability

PROJECTS

HYDRA — Reliable Webhook Delivery Engine

Tech Stack: Node.js, Express, Kafka, Redis, BullMQ, PostgreSQL + Prisma

- Zero-loss idempotent event pipeline via Transactional Outbox Pattern with atomic PostgreSQL commits and lock-free Kafka batch relay (SKIP LOCKED).
- Two-tier distributed backpressure: Layer 1 sheds ingress traffic (HTTP 503) at 10K outbox backlog; Layer 2 pauses Kafka consumer at 5K queue depth to prevent cascading failures.
- Kafka consumer feeds BullMQ worker pools routing webhooks to hundreds of endpoints with optimized dispatch latency.
- In-memory Redis subscription caching (30-min TTL) with active cache invalidation, resolving multi-tenant fan-out routing in sub-milliseconds without database hits.
- Redis circuit breaker (Lua state machine) with smart retry classification (4xx→DLQ, 5xx→backoff), and 1-click batch DLQ redrive.
- Sub-millisecond rate limiting via Redis sliding-window Lua script; HMAC-SHA256 webhook signing with replay-attack protection.
- Real-time observability dashboard (Next.js) tracking 7 delivery KPIs including P95 response latencies, failure rates, and granular per-attempt HTTP audit logs.

Veyra — The Home for Modern Creators

Tech Stack: Node.js, Express.js, MongoDB, Redis, LLM APIs, Razorpay, Next.js, React-Querry

- Engineered multi-tier Redis rate limiting and 3-stage AI content moderation using Groq LLM.
- Built a Razorpay subscription engine with HMAC-SHA256 verification and auto-expiry lifecycles.
- Architected secure auth with JWT token rotation, Google OAuth 2.0, and Redis cache-aside queries.

EDUCATION

B.Tech – Computer Science, KIET Group of Institutions, Ghaziabad CGPA: 8.04/10

ACHIEVEMENTS

- Awarded "Best Intern of the Month" at SmallFare for frontend optimization and component architecture.
- Solved 250+ DSA problems on LeetCode across arrays, trees, graphs, dynamic programming, and system design patterns.
- Designed and shipped two production-grade backend systems (HYDRA, Veyra) handling multi-tenant webhooks and subscription workflows.
