PROFESSIONAL SUMMARY

Full-stack MERN developer with strong expertise in Data Structures & Algorithms (250+ problems solved) and experience building AI-powered secure web applications with production-grade authentication, intelligent moderation systems, and analytics dashboards. Skilled in designing scalable backend systems and modern full-stack architectures.

TECHNICAL SKILLS

Languages: C, C++, JavaScript

Core Concepts: Data Structures & Algorithms, REST APIs, Problem Solving **Frameworks:** React.js, Node.js, Express.js, Tailwind CSS, Bootstrap

Databases: MongoDB, MySQL

Tools: Git, GitHub, Postman, VS Code, Vercel

Specialization: Full-Stack Development, AI Integrations, Secure Authentication, Role-Based Access Control

PROJECTS

Postify – AI Powered Blogging Platform

Live: <https://postifyf.vercel.app> | Tech: MERN, React Query, Redis, JWT, Google OAuth, AI APIs, ImageKit, Vercel

- Architected and deployed a production-grade AI-powered blogging platform on Vercel using the MERN stack with
- optimized client-side caching and fast data fetching.
- Implemented secure multi-provider authentication with Google OAuth, OTP verification, JWT access/refresh tokens
- with rotation, HTTP-only cookies, and Redis token blacklisting.
- Engineered a two-layer comment moderation system (rule-based + AI) to automatically filter abusive, spam, and
- unsafe content, reducing manual review effort.
- Built a role-based Admin Dashboard for blog publishing, draft management, comment moderation, and full audit history of administrative actions.
- Developed AI blog generation and one-click summarization with automated content quality reports (word, sentence, paragraph counts, quality score).
- Designed an AI usage analytics system tracking daily requests, total usage, most-used features, and per-user activity logs.
- Implemented an AI configuration panel to toggle features, switch models, and enforce per-user and global daily limits.
- Enforced Redis-based rate limiting, cooldowns, and OTP throttling to prevent spam, abuse, and burst AI requests.
- Optimized media delivery using ImageKit CDN and improved performance through caching, lazy loading, and efficient API design.

AI B2B Proposal Generator

Live: <https://ai-b2-b-proposal-generator-zeta.vercel.app> | Tech: React, Node.js, Express, AI APIs

- Built AI system that generates structured B2B proposals from business inputs.
- Implemented prompt engineering for solutions, pricing, and deliverables.
- Developed responsive React interface with backend API integration.

AI Auto Category & Sustainability Tag Generator

Live: <https://ai-auto-category-tag-generator-87y5.vercel.app> | Tech: React, Node.js, MongoDB, AI APIs

- Built AI-powered system to classify products and generate sustainability tags.
- Designed backend APIs for product description analysis.
- Stored generated tags in MongoDB for analytics and filtering.

EDUCATION

B.Tech – Computer Science Engineering

KIET Group of Institutions, Ghaziabad — CGPA: 8.04 / 10

Class XII – Rajasthan Board — 92.4%

Class X – Rajasthan Board — 90%

ACHIEVEMENTS

- Solved 250+ Data Structures and Algorithms problems on LeetCode.
- Built production-ready full-stack applications with AI integrations.
